SUMMARY

Passionate software developer focused on React, Next, Typescript, Tailwind CSS and shad/cn ui. Familiar with Node and Express, AWS tools like Lambda, API Gateway and Dynamodb, plus payment tools with Stripe. Experienced with AI voice tools and chatbot building. Enjoys working with teams and growing as a front-end developer.

WORK EXPERIENCE

(Jan 2025- Present)

GIC Myanmar

Junior Software Engineer

- Developed a responsive e-learning website that allows both users and administrators to access features based on their roles. Built with React, Tailwind CSS, Laravel and MySQL in a team of four.
- Developed an AI-powered chatbot that reviews project emails, identifies key technical needs, and quickly suggests the best-matched engineers from the internal team. Developed with Microsoft Copilot Studio and Power Automate.
- Engineered a responsive and accessible AI chatbot interface for MyAI using Next.js, Tailwind CSS, and shadcn/ui. Developed reusable UI components to ensure a consistent user experience, integrated AWS Lambda APIs for seamless chatbot interactions, implemented dynamic QR code generation for social sharing.
- Developed a web-based Employee Management System (EMS) using Laravel and MySQL to centralize HR operations. Leveraged AI-assisted development (Claude) and prompt engineering to accelerate architectural planning, database schema design, and complex feature implementation, significantly increasing development velocity.

(April 2024- June 2024)

AGB Communication Co., Ltd

Backend Developer (Internship)

- Developed a comprehensive HR solution designed to digitize workforce management and automate payroll processing. developed the backend for six-member team using Node.js and Express.
